ONE UP: DIAGONAL

BY RODOLFO KURCHAN

As in "One Up," place the numbers 1 to *n* in each row and column, where *n* is the number of cells between thick walls. For example, if a space is only one square long, it must contain the number 1. If the space is two squares long, it will contain the numbers 1 and 2, in some order. In this variation, the shaded diagonal must also have numbers from 1 to n without repeating.

If you enjoy One Up puzzles, you can play a daily puzzle at OneUpPuzzle.com.
